Keywords:
Security, Security Plug, Shorting Plug, Shorting, TLDM security

Description:

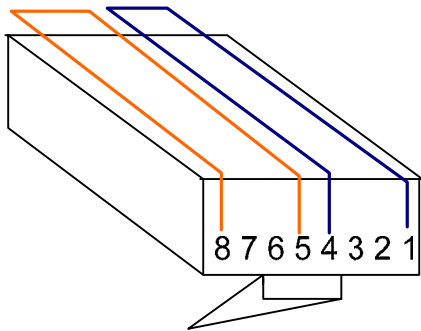

If your security system is not ready to bring online but you would like to terminate all your connections to the TLDM, insert a security shorting plug into the security jack this will allow you to bypass the security system while still being able to use your phone lines.

Using the EZ-RJ45 male plug, bend two short pieces of 24gauge wire (use trimmed ends from CAT5e punch downs) into a "U" shape. Insert one piece of wire so it connects pin 1 to pin 4 and insert the second piece of wire so it connects pin 8 to pin 5 of the EZ-RJ45. Crimp the plug to complete the circuit.

If this does not solve your problem, please contact Leviton Technical Support for assistance.
