

Multi-Bay Structured Media® Center Enclosure

APPLICATION

Multi-Bay Structured Media Center enclosures provide excellent termination and mounting locations for both in-home structured wiring and fiber-to-the-home (FTTH) optical network termination (ONT) components when the fiber is brought to the interior of the home for termination.

The structured wiring components typically mount in the upper section of the dual enclosure and the ONT mounts in the lower section. The enclosure can be surfacemounted or mounted between metal or wood wall studs (on 16" centers), using provided screws. After installation of the drywall, during the trim-out stage, each section may receive either a screw-on flush-mount cover or a hinged door, with or without lock.

SPECIFICATION

The Multi-bay enclosure shall be made of 20-gauge, white powder-coated steel. It shall allow flush mounting with four wood screws (provided) on standard 16" center wall studs prior to dry-wall installation. The design of the unit shall also allow surface-mounting on a variety of surfaces capable of supporting the enclosure and contents. The enclosure includes multiple knockouts on the top and bottom to support conduit up to 2" in diameter and to facilitate cable routing and entry. The interior design of the enclosure shall accept all Leviton pre-configured panels, modules, brackets, and mounting plates. The collar joining the sections of the enclosure shall provide for installation of two duplex AC outlets for powering devices in the upper section. The bottom section shall provide knockouts for various Structured Media power modules. The enclosure shall be cULus listed and comply with all TIA-570-B requirements.

POWER SUPPLY COMPATIBILITY

In most installations, multiple power supplies may be installed in Structured Media Center enclosures, one in each bay of the panel. Special considerations should be made for the size of the power supply and the space it may occupy in conjoining bays. The spot-welded collar between the sections includes a provision to receive a duplex receptacle plate for powering the upper section. Knockouts in the lower bays are the same as in other Structured Media Center enclosures to accept various Leviton AC and AC/DC power units.

PHYSICAL SPECIFICATIONS

Dimensions: (See drawings)

Materials: 20-gauge steel on main enclosure sections,

18-gauge on spot welded collar permanently

and rigidly joining the sections

Coating: White powder coating on all sheet metal surfaces

Covers & Doors: 18-gauge steel

Locks: Locks for covers are available as an option

STANDARDS COMPLIANCE

Meets or exceeds all applicable standards and agency requirements:

- UL Standard 1863
- TIA-570-B

WARRANTY INFORMATION

Two-year limited warranty

COUNTRY OF ORIGIN

Manufactured in Mexico
